

# ST. DAVID'S NATIONAL SCHOOL

Piper's Hill Educational Campus, Kilcullen Road, Naas, Co. Kildare.

School Patronage: Church of Ireland

Roll No.: 11893G

## Science Policy

### **Introductory Statement**

We aim through this plan, drawn up in accordance with the science curriculum, to set out our approaches to the teaching and learning of science. It will form the basis for teachers' long and short-term planning. It will also inform new and temporary teachers of the approaches and methodologies used in our school.

This plan has been reviewed by the staff in February 2023.

### **Rationale**

This policy has been reviewed by the teaching staff as part of our on-going review of curriculum policies. The purpose of this policy in science is to compile a user-friendly document, outlining the approach, methodologies, timetable, content and resources necessary to implement the subject as per The Primary Curriculum 1999. It is hoped that this plan will ensure that children will experience a broad and balanced curriculum in which undue repetition and significant gaps are avoided. It is intended that over a two-year period all strand units from each strand should be covered. There should also be a balance between the development of scientific knowledge and understanding and the processes of working scientifically. This should facilitate continuity and progression in the development of scientific ideas and in the application of investigative skills.

### **Vision**

In St. David's school we hope to develop in our pupils an enthusiasm for all aspects of science, to give pupils an opportunity to explore and investigate scientific ideas and concepts while cultivating an appreciation of and respect for the diversity of living and non-living things.

## **Aims**

The aims of science education are:

- To develop knowledge and understanding of scientific and technological concepts through the exploration of human, natural and physical aspects of the environment.
- To develop a scientific approach to problem-solving
- To encourage the child to explore, develop and apply scientific ideas and concepts, through designing and making.
- To foster the child's natural curiosity, so encouraging independent inquiry and creative action.
- To aid the child to appreciate the contribution of science and technology to the wider world.
- To cultivate an appreciation of and respect for the diversity of living and non-living things.
- To encourage the child to become environmentally responsible and aware.
- To enable the child to communicate ideas, present ideas and report findings using a variety of media.

## **Content of plan - curriculum**

- Children's ideas
- Practical investigations
- Classroom management
- Key methodologies
- Linkage and integration
- Using the environment
- Balance between knowledge and skills

## **Children's ideas**

Children's ideas and practical experiences will be used as a starting point for activities. This will be useful for a teacher in assessing the level of a child's scientific development. Where appropriate, opportunity will be given for these ideas to be further explored and investigated scientifically.

### **Practical investigations**

Practical activities will play a central role in science at all levels in the school. A combination of open and closed investigation will be used. Where possible, opportunity for free exploration of materials will be given. As children progress through the school, their understanding of the concept of a fair scientific test will be seen as central to Science education.

### **Classroom management**

Children will be given the opportunity to work in a variety of groupings – whole class, small group and individually. A good variety of materials will be made available for activities.

### **Key Methodologies**

Teachers will endeavor to ensure that the range of methodologies suggested in the curriculum are used – talk and discussion, problem solving, active learning, use of the local environment, skills through content and collaborative/cooperative learning. Children will be given the opportunity to participate in science competitions e.g. Mini Scientist competition sponsored by Intel and BT Young Scientists.

### **Linkage and integration**

Where appropriate, linkage within strands of the science curriculum and integration with other curricular areas will be developed, in particular, S.E.S.E., visual Arts, maths and oral language.

### **Using the environment**

Every effort will be made to use the school environment for scientific investigation such as observation of birds, trees and plant life while causing as little disruption as possible

within the context of the green code. We will grow bulbs, vegetables, wild flowers etc. in boxes.

### **Designing Science trails.**

We are registered for Green Schools. Recycling is actively encouraged through provision of appropriate bins within the context of our school's green code. We were awarded our second green flag for energy conservation and awareness. Guest speakers are invited to share their experience of scientific processes.

### **Balance between knowledge and skills**

The need for balance between knowledge and skills is recognised. An emphasis is placed on helping the children to work as scientists by observing, hypothesising, predicting, investigating, recording and analysing results.

### **Organisation**

#### Resources and equipment

A central supply of resources, equipment and general reference books are kept in the art cupboard as well as individual classrooms.

#### Broad and balanced

In order to ensure the delivery of a broad and balanced curriculum, a 2-year cycle has been developed with strand units being selected from each strand each year.

#### Safety

During practical work, teachers should be aware of the safety implications of any exploratory or investigative work being undertaken. Children should be encouraged to observe safety procedures during all tasks. There are many safety issues to consider including:

#### Plants and Animals

Disposable gloves to be used when investigating hedgerows. Children should never handle unknown or unfamiliar plants, especially fungi. Gloves to be worn also when handling birds or animals. Hand washing should be encouraged after handling plants and animals.

### Electricity

Children should only use low-voltage battery powered devices. Mains electricity should never be used for electricity and magnetism experiments. If mains-powered equipment is used then it should be connected and operated by the teacher only. Children should be repeatedly warned about the danger of mains electricity.

### Equipment

The use of glass apparatus and sharp-edged tools should be avoided except under the direct supervision of the class teacher. Plastic should be used where possible. Thermometers should be handled carefully. Spirit thermometers should be used where possible.

### Eyes

Children should never use lenses, binoculars or other lens devices to look directly at the sun or other intense source of light. This includes dark glass and plastic.

### Chemicals

Household chemicals should be purchased to meet the requirements of the experiment and will be disposed of by the teacher. We will endeavor to avoid using any chemical containing bleach.

### Polythene/Plastic Bags

Children should be warned of the dangers of using these bags as they may cause suffocation.

### Heat

Care should be taken in using appropriate methods of heating.

### Cleanliness and Hygiene

Random sniffing and tasting will be discouraged. The teacher should explain that anything the children are asked to smell or taste has been carefully chosen for that activity. The sharing of spoons or other utensils will not be permitted. Hand washing should be encouraged before food activities.

### **Implementation of Plan**

#### Differentiation

Science is timetabled to accommodate the inclusion of all pupils. Where appropriate, exceptionally able pupils will be encouraged to investigate further. Where possible the S.N.A. will be used to assist pupils with special educational needs and/or curricular activities may be differentiated to suit individual pupils, as appropriate.

#### Assessment and Record keeping

Assessment in Science is concerned with the children's mastery of knowledge and understanding of the strands of the Science curriculum and the development of skills and attitudes. Consequently a broad range of assessment tools and approaches will be used including;

1. Teacher observation
2. Teacher designed tasks and tests
3. Concept mapping
4. Work samples

#### Homework

From time to time, practical activities may be given for homework to encourage pupils to relate scientific learning to everyday life and to involve parents in the learning process.

#### Individual teacher planning

Individual teachers are responsible for their own short term and long term planning within the 2 year cycle. Each teacher has a copy of the strand units to be covered each year and appropriate reference material. (See appendix). A variety of textbooks will be used by teachers to support their teaching and to support student learning. Other resources including Twinkl, Youtube etc. will also be used.

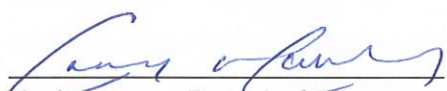

Staff development

Staff are made aware of science courses and encouraged to attend seminars etc. in order to promote CPD.

Review

This policy will be reviewed as deemed necessary.

Ratified by Board of Management on 26/6/23  
(Date)
